Election/Restrictions

1. The Applicants' election without traverse of Group II, Claims 16 to 18, in Paper No. 4 is acknowledged.
2. Claims 1 to 15 are withdrawn from consideration as being for a non-elected invention. The Applicants are requested to cancel the non-elected claims as part of a complete response to this office action. Cancellation of the non-elected claims would not preclude the later filing of a divisional application on the non-elected invention (please see 35 USC 120 and 121).

Drawings

3. Figures 1 to 30 (inclusive) should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

4. The disclosure is objected to because of the following informalities: In Line 27 on Page 1, "careers" should be changed to ---carriers---. Appropriate correction is required.

5. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claim 16 is rejected under 35 U.S.C. 102(b) as being anticipated by admitted Prior Art Figures 8.

Admitted Prior Art Figures 8 shows all aspects of the instant invention including a substrate **11** with a non-volatile memory **A** and first to third MOS transistors **B, C, D** with gates insulation films **12B, 12C, 12D** of increasing thicknesses and gates electrodes **16B, 16C, 16D** of substantially identical height.

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order

for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

9. Initially, and with respect to Claims 17 and 18, note that a "product by process" claim is directed to the product per se, no matter how actually made. See *In re Thorpe et al.*, 227 USPQ 964 (CAFC, 1985) and the related case law cited therein which make it clear that it is the final product per se which must be determined in a "product by process" claim, and not the patentability of the process, and that, as here, an old or obvious product produced by a new method is not patentable as a product, whether claimed in "product by process" claims or not. As stated in Thorpe,

even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. *In re Brown*, 459 F.2d 531, 535, 173 USPQ 685, 688 (CCPA 1972); *In re Pilkington*, 411 F.2d 1345, 1348, 162 USPQ 145, 147 (CCPA 1969); *Buono v. Yankee Maid Dress Corp.*, 77 F.2d 274, 279, 26 USPQ 57, 61 (2d. Cir. 1935).

Note that Applicant has burden of proof in such cases as the above case law makes clear.

10. Claim 18 is rejected under 35 U.S.C. § 102(b) as being anticipated by, or in the alternative, under 35 U.S.C. § 103(a) as obvious over admitted Prior Art Figures 8.

Admitted Prior Art Figures 8 show all aspects of the instant invention (Paragraph 7) further including a floating gate **13** with a control gate **16** formed on said floating gate via an insulation film **14**.

As to the grounds of rejection under section 103(a), how the gate electrodes are formed (either from the same silicon films or from different films) relates to intermediate process steps and does not affect the final device structure. See MPEP § 2113 which discusses the handling of "product by process" claims and recommends the alternative (§ 102 / § 103) grounds of rejection.

11. Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over admitted Prior Art Figures 8 and Gwen et al. (U.S. Patent No. 5,472,892).

Admitted Prior Art Figures 8 show most aspects of the instant invention (paragraph 7) except for the control gate and the MOS gates constructed of two silicon films. Gwen et al. teaches (e.g. Figure 3I) to form control gate and MOS gates of two silicon films **206, 208** to decrease the number of processing steps (Column 4 Lines 45 to 50). It would have been obvious to a person of ordinary skill in the art at the time of invention to form control gate and MOS gates of two silicon films as taught by Gwen et al. in the Device of the Admitted Prior Art Figures 8 to decrease the number of processing steps.

Conclusion

12. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Muramoto et al. (U.S. Patent No. 6,198,140) teach to have MOS gate films of varying thicknesses and Yaegashi et al. (U.S. Patent No. 6,265,739) teach a similar device as the instant invention.
